Water

Weather

Vital for life

Climate change

Storms are more severe

Changes to weather patterns

Droughts are now more common

Floods are happening around the world

Developing countries can't save themselves

Ocean levels are rising as temperatures increase

Icebergs and glaciers are melting at an alarming rate

Pollution and dumped plastics are killing the wildlife

Our world is out of balance in many different ways

What can we do to address these problems?

It's not too late – act now

NOW!
